The project.

Olympia London's Grand Hall, one of the capital's busiest event venues, needed a complete washroom refurbishment to meet the demands of large visitor numbers. The client wanted a modern, durable solution that would improve hygiene and flow while elevating the visitor experience. With sustainability, efficiency and ease of maintenance at the forefront, the project required innovative, integrated products that would stand up to continuous high-traffic use.

The challenge.

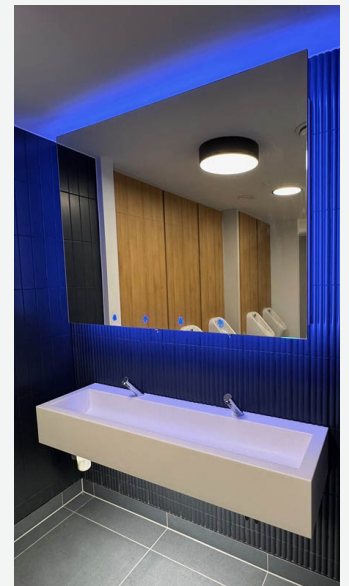

Olympia London has become a cultural landmark, attracting millions of visitors each year to its diverse programme of exhibitions, live events, restaurants and bars. As part of the venue's multi-million-pound redevelopment, the Grand Hall washrooms required a complete transformation to provide modern, durable facilities that could cope with exceptionally high visitor numbers.

Hygiene was a key consideration, with an emphasis on reducing touchpoints and creating a streamlined user journey. Part of the challenge was to integrate handwash, soap and drying facilities into a compact, intuitive and sustainable solution. Our Accredited Installers, G Haslehurst Builders Ltd, were appointed to deliver the installation.

The solution.

The focal point of Olympia London's Grand Hall washroom refurbishment is Venesta's Mirror Box Units. The slimline units integrate taps, soap dispensers and high-speed hand dryers seamlessly behind a sleek mirrored façade.

Etched iconography guides visitors intuitively, while the customisable LED feature lighting offers over 16 million colour options, allowing the ambience to be adapted for different

events or to reflect brand identity. By centralising soap, wash and dry functions, the Mirror Box reduces clutter, minimises touchpoints and simplifies cleaning and maintenance in this high-traffic environment.

Unity cubicles were specified in durable High Pressure Laminate (HPL) to provide strength and longevity for continuous use, with robust hardware including emergency release indicator bolts for safety. Set-back pedestals achieve a distinctive floating appearance, enhancing the contemporary finish of the washrooms.

To speed up installation, Venesta's innovative Vepps pre-plumbed IPS panels were specified, reducing onsite fitting time by up to 50% while ensuring secure, easily accessible duct spaces. Finally, Solid Surface washtroughs in a seamless finish optimise space for multiple users at once, supporting high standards of hygiene with easy-clean surfaces and minimal joins.
