Washtroughs

The project.

Wembley Stadium is the UK's largest sporting and entertainment venue. It welcomes more than 90,000 fans to football finals, concerts and international events.

The stadium needed washrooms that matched its world-class reputation. We worked with the project team to supply a full stadium washroom refurbishment. Our Unity cubicles, Vepps pre-plumbed panelling and Solid Surface vanity units created a seamless, durable look that fits Wembley's scale and prestige.

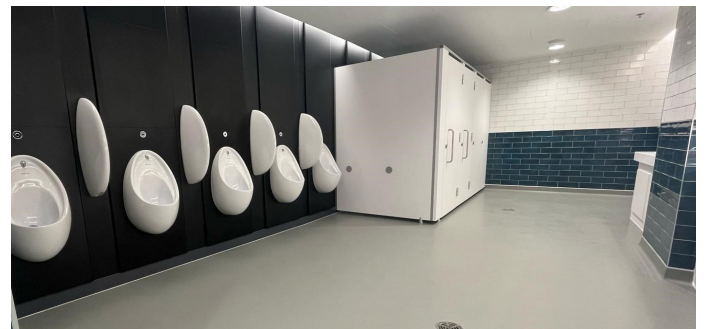

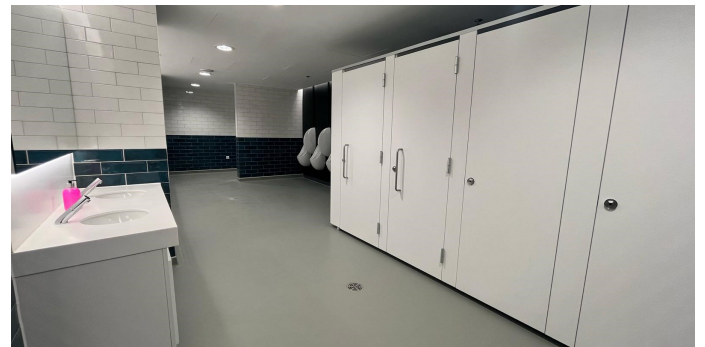

The challenge.

Wembley's washrooms face extraordinary demands during peak events. The brief required:

- Toilet cubicles and hardware strong enough for high-traffic stadium washrooms.
- Easy-clean surfaces and integrated systems for quick turnaround between fixtures.
- Cubicles and panelling designed with privacy and safety in mind.
- Fast installation with minimal disruption to Wembley's busy event calendar.
- A clean, modern finish worthy of a global landmark.

The solution.

Unity toilet cubicles in High Pressure Laminate (HPL) were specified for their flush-fronted, modern design and proven durability. The Porcelain laminate finish complements Wembley's contemporary interiors, while the material resists impact, scratches and heat. Robust stainless steel hardware provides strength and long-lasting performance.

Vepps speeds up installation and makes servicing easier. Delivered pre-plumbed with sanitaryware, it can cut fitting time by up to 50%. Hinged access panels keep maintenance simple, while secure ducts stay out of public reach.

Solid Surface vanity units with integrated basins give a seamless finish. They resist scratches and staining, and their easy-clean design suits the heavy use of major events. Crisp lines tie the look together with Unity cubicles for a cohesive, durable washroom design.

Our Accredited Installers, T-IPS Washrooms Ltd, completed the installation to Venesta's high standards. The result is a modern, robust washroom environment worthy of Wembley Stadium's global status.
